

KIDS & the COVID-19 VACCINE

MYTHS & FACTS

(As of January 20, 2022)

COVID-19 vaccines will give your child COVID-19.

COVID-19 vaccines do not use the live COVID-19 virus, so they cannot cause COVID-19 illness.

COVID-19 vaccines have harmful ingredients or electronic chips that can hurt your child.

COVID-19 vaccines are free from preservatives, animal products, gluten, latex, metals, and electronics.

COVID-19 vaccines will change your child's DNA.

COVID-19 vaccines never enter the nucleus of the cell where DNA is located, so they cannot change DNA.

COVID-19 vaccines will cause problems when your child is an adult and wants to have babies.

COVID-19 vaccines do not change fertility (ability to have babies) in children or adults.

Children ages 5-11 get a smaller dose of the same COVID-19 vaccine that people ages 12 and older get and may have the same normal side effects that go away after a few days.

SAFE. EFFECTIVE. FREE.
